

The Aqua M60 from FAST is a simple compact acoustic leak detection system for water pipes.

The Aqua M60 is an above ground leak detection solution that provides a simple and fast methodology of zone location and pin-pointing water leaks.

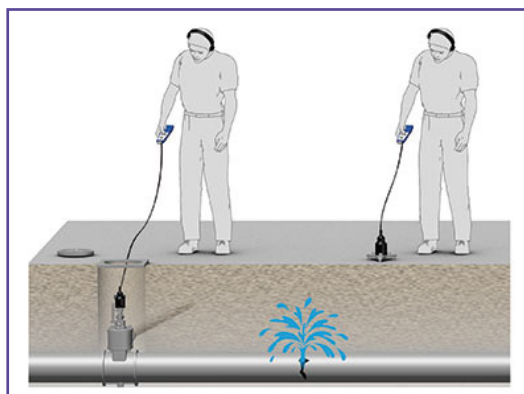

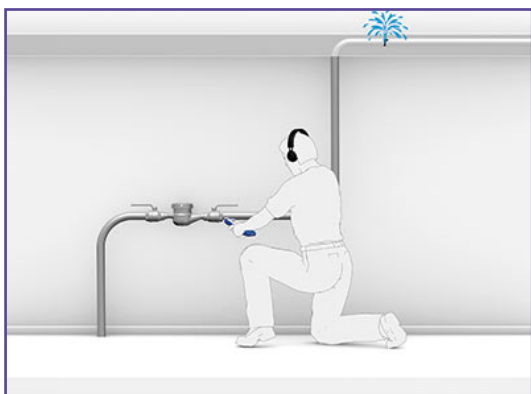

The Aqua M60 has an internal acoustic sensor which allows it to be used on internal pipework which is ideal for use inside houses and in confined spaces. The internal sensor will work on both plastic and metal pipes.

The Aqua M60 can also be connected to an external accelerometer. This can be used for connection into deep excavations / manholes, or for connection onto valves.

The accelerometer can also be combined with a tripod to use it as ground microphone to allow accurate pin-pointing of the leak.

Extension rods can also be connected to allow a fixed rod connection onto pipes, valves and assets.

The Aqua M60 uses Bluetooth headphones (speakers optional) to provide a tangle free operation. Combined with an easy single hand operation, the Aqua M60 is a simple to use tool. The compact robust design has a highly sensitive piezo-ceramic sensor and a low noise quality amplifier to ensure that leaks can be detected.

Product Specification				
Description	M60			
Part Number	300200	300201	300202	300203
Acoustic Leak Detection	Yes	Yes	Yes	Yes
Gas Leak Detection	No	No	No	No
Aqua M60 Control Unit	Yes	Yes	Yes	Yes
Extension Rods	Yes	Yes	Yes	Yes
Magnet	Yes	Yes	Yes	Yes
Tripod	Yes	Yes	Yes	Yes
Headphones	Yes	Yes	Yes	Yes
Charging Set	Yes	Yes	Yes	Yes
Universal Accelerometer (M60)	No	Yes	No	Yes
Carry Case Basic	No	Yes	No	No
Carry Case IP67	No	No	No	Yes

Test rod with extensions

Bluetooth Headphones

Magnet

Charging Sets

Universal Accelerometer

Tripod

Transport Case
